

DENSION
New Product Introduction

New Part Number: BTA1500 Dension Bluetooth(add-on) for Gateway 500 for Mercedes, Porsche, Audi, and BMW

ETA: In Stock

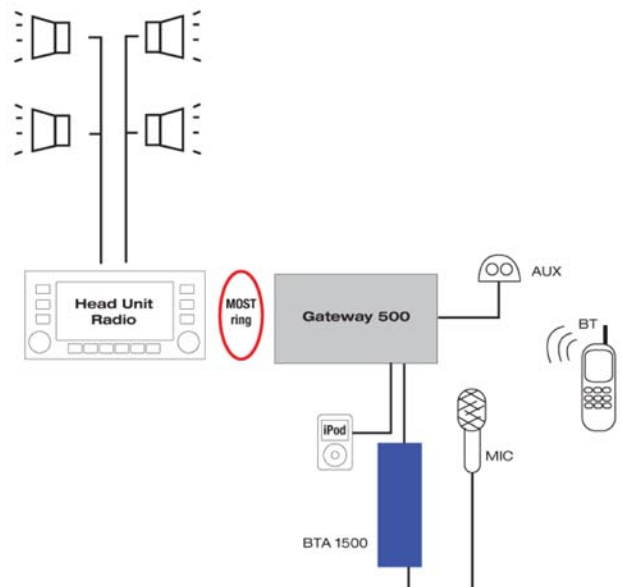

Description of new product: BTA1500 is an accessory to the GW500 and enables hands free telephone operation and music streaming (A2DP) by making a Bluetooth connection with a compatible phone.

Adaptor Function: Once the BTA 1500 has "paired" with your phone, you can make and receive telephone calls, using the controls on your radio or steering wheel. The sound will come through your car audio system and where there is text available in the car, the call details will be displayed. In some vehicles, you can browse the phone book on the car's screen.

Music Streaming: Many phones are now capable of storing large quantities of music. Dension BTA features the A2DP (Advanced Audio Distribution Profile) which allows the user to stream this music, via Bluetooth, into the car's entertainment system so that it can be heard through the car speakers. The Gateway 500 will then allow the driver full control over the phone's content from the radio, steering wheel, MMI or iDrive controls.

Included with the product: (1) BTA1500 Bluetooth accessory module for use with GW51MO2
(1) Microphone

Compatibility: This Product adds Bluetooth functionality to Mercedes, Porsche, Audi, and BMW applications of the Dension Gateway 500 (GW51MO2) sold seperately

NOTE: this product REQUIRES Dension GW51MO2 (iPod / USB interface) to function in a vehicle.
