

Product Sales Flyer **Model # SNI-45T**

The SNI-45T is a High Powered 2- channel line output converter with a built in low voltage output trigger for adding amplifiers to an OEM radio. The low voltage circuit senses voltages as low as 0.8 volts and gives you a 12 volt output with a one second delay to eliminate turn-on pops.

Features:

- Fixed 10:1 conversion.
- Linear from 20-20,000Hz at +/- 5 dB, while maintaining signal phase.
- Isolates input and output circuits to prevent ground loop noise.
- Triggers senses voltage from speaker wire or any +5volt source
- 2 – 50 watts per channel
